INDEX.

Arnot, G. A., Esq. characters of three new genera of Indian plants, 314

Address delivered by Professor Whewell in the Senate-House at Cambridge, on June 25. 1833, 88

Africa, Central, projected expedition into, 107

Anatomy of the rorqual whale, 181

Animals depicted on antique monuments, account of, 168, 285

Arago, his historical eloge of Alexander Volta, 1—on the thermometrical state of the terrestrial globe, 205

Arts, Society of, for Scotland, proceedings of, 197, 396

Atmosphere, colour of, observations on, by Count Xavier de Maistre, 56

Aurora borealis, instructions for observers of their height, sound, periods, effect on the magnetic needle, 35

Berlin cast-iron ornaments, account of, 384

Blood, experiments and observations on its arterialization, by Dr William Gregory, 285

Bone caves in the south of France, observations on, 302

Burdiehouse fresh-water limestone, observations on, by Dr Hibbert, 190—additional notices relative to the fresh-water limestones in the vicinity of Edinburgh, belonging to the carboniferous group of rocks, by Dr Hibbert, 386

Cascarilla, the bark of, observations on, by David Don, Esq. 367

Coldstream, Dr, his account of the Limnoria terebrans, a minute crab, which proves very destructive to wooden erections, as piers, 316

Chronometer signal, account of its erection at Greenwich, 158

Coniferæ, observations on, by William Nicol, Esq. 137—additional observations on recent and fossil coniferæ, by William Nicol, Esq. 310

Curtis, John, Esq. on the habits of some land-shells, 392
Cuvier as a naturalist, by C. L. Laurillard, 340—his eloge of Arago, 1

Davy, Dr John, his experiments and observations on the combinations of carbonic acid and ammonia, 255
Don, David, Esq. some remarks on the plant which yields the cascarilla bark, 367
Duncan, Rev. James, his Entomologia Edinensis noticed, 394

Electro-magnetic experiments, account of, 71
Electricity and magnetism, observations on, by Professor M. A. de la Rive, 266
Entomologia Edinensis, Messrs Wilson and Duncan's new work on, noticed, 394
Extinct animals, observations on, by Marcel de Serres, 168, 285

Fishes, shower of, 393
Fossil tooth, in red sandstone, found by Lord Greenock, and described by Dr Grant, 38

Galbraith, Mr, his observations on trigonometrical surveying, 110
Gairdner, Dr M., his observations during a voyage from England to Fort Vancouver, on the north-west coast of America, 290
Geology of the Valley of Oodipoor, by Dr Hardie, 59, 278
Geology of Norfolk, Outlines of, noticed, 394
Graham, Dr, his account of new and rare plants, 175
Granada, observations on the tertiary formation of, by Brigadier Silvertop, 45
Grant, Dr R., his account of a fossil-tooth found in red sandstone, 38
Gray, Right Hon. Lord, meteorological table kept by him at Kinfauns Castle, 389
Gypsies, remarks on, 67

Hardie, Dr James, his geology of the valley of Oodipoor, 59, 278
Heat, development of, in flowers of Caladium pinnatifidum, by Dr Schultz of Berlin, 88
Hibbert, Dr, his observations on the Burdiehouse limestone and its saurian remains, 199—additional notices, 386

Iron slags, on the composition of, by J. F. W. Johnston, 190

Land-shells, on the habits of some of them, 392
Low, the Orkney naturalist, 390

Macgillivray, William, his remarks on Mr Nicol's observations on the structure of recent and fossil Coniferæ, 369
Man, weight of, at different ages, observations on, by Quetelet, 334
Marcel de Serres on extinct animals, 168, 285
Medicine, state of, in Turkey, by Dr Oppenheim, 114
Memoir on the question, Whether any land animals have ceased to exist since man's formation? and, Whether man has been contemporaneous with species now lost, or appearing no longer to have representatives on the earth? by Marcel de Serres, 168, 285
Meteorological Table kept at Kinfauns Castle, 389
Meteoric stones, origin of, by F. G. Fischer, Esq., 75
Method of so far increasing the divergency of the two rays in calcareous spar that only one image may be seen at a time, 372
Migratory habits of certain species of Hirundo and Sylvia, 391

Nicol, William, observations on recent and fossil Coniferæ, 187—additional observations on recent and fossil coniferæ, 310

Oodipoor, its geology, by Dr Hardie, 59
Oppenheim, Dr, his observations on the state of medicine in Turkey, 114

Patents, list of, granted at Edinburgh from 24th June to 27th August 1833, 204, 398
Proofs that the human bones and works of art found in caves in the south of France, are more recent than the antediluvian bones found in these caves, 302
Petroleum or mineral-oil, observations and experiments on, by Dr Reichenbach, 376

Quetelet, his inquiries respecting the weight of man at different ages, 334

Rattlesnake disarmed by the leaves of the white ash (Fraxinus americana, Mich.), by Judge Woodruff, 43
Rive, Professor De la, his observations on electricity, and on the natural sources of electricity and magnetism, 266

Reichenbach, Dr, his observations and experiments on petroleum or mineral-oil, 376
Royal Society of Edinburgh, proceedings of, 181
Royle, Mr J. F., notice of his Illustrations of Botany, and other branches of the natural history of the Himalayan mountains, 393

Silvertop, Brigadier, his sketch of the tertiary formation in the province of Granada, 45
Societies, proceedings of,—of Arts for Scotland, 197, 396—Royal Society of Edinburgh, 181—Wernerian Natural History Society, 195
Statistic views of the mortality in various counties in Europe, 259
Statutes of the University of Edinburgh relative to the degree of M. D. 1833, 200

Trigonometrical surveying, observations on, by Mr Galbraith, 110

Volta, Alexander, his eloge, by Arago, 1

Wauchope, Capt. R., his account of the establishment of his signal for the ascertaining the rates of chronometers at the Royal Observatory, Greenwich, 158
Weight of man at different ages, inquiry about, 334
Wernerian Natural History Society, proceedings of, 195
Whewell, Rev. W., his address, delivered in the Senate-House at Cambridge, June 25. 1833, 90
Wilson, James, Esq. his Entomologia Edinensis noticed, 394
Wood, Mr Henry, his new work on the Mammalia noticed 391
Woodward, Mr Samuel his Outline of the Geology of Norfolk noticed, 394

PRINTED BY NEILL & CO. OLD FISHMARKET.
